

CHROME POLISH

CLEAN AND CARE POLISH

Description

Chrome polish is a high gloss polish for aluminium, chrome and stainless steel. This product cleans, polishes and protects the surface area. Chrome polish, for example, will clean the 'burnt on road tar' from your exhaust and leave a thin layer on the cleaned surface, which will protect the bike from corrosion.

Application

All chrome parts, i.e. exhaust, aluminium rims, spokes, protective plates, car rims, and can also be applied to other metal fittings or mountings in your bathroom or kitchen.

Use

Shake before using. Put the polish on a dry, clean towel or directly from the can onto the cleaned metal part. Apply lightly and rub the chrome polish evenly over the metal. Do not clean metal when it is hot (Contains Aceton).
